

# Build -> Review -> Test -> Reflect -> Share

A compact NAS Jiaxing guide for using AI as a drafting assistant while keeping teacher judgement, privacy and classroom quality under human control.

## 1. Set the data boundary before choosing the tool

|                                                                                                                                                                  |                                                                                                                                                       |                                                                                                                                                                                                |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>GREEN</b><br><b>Low-risk drafting</b><br>Generic lesson ideas, fictional examples, teacher-created text adaptation, vocabulary and retrieval-practice drafts. | <b>AMBER</b><br><b>Teacher review required</b><br>Student-facing worksheets, answer keys, rubrics, factual content, translations and feedback drafts. | <b>RED</b><br><b>Keep out of unapproved public AI</b><br>Identifiable or sensitive student data, safeguarding records, credentials, confidential reports and autonomous high-stakes decisions. |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

**Rule:** this is a practical workshop aid, not a replacement for school policy. If school policy is stricter, school policy wins.

## 2. Write a teacher brief, not a "magic prompt"

|                                                                           |                                                      |                                                                                    |                                                                                 |
|---------------------------------------------------------------------------|------------------------------------------------------|------------------------------------------------------------------------------------|---------------------------------------------------------------------------------|
| <b>1 CONTEXT</b><br>Grade/approximate level, topic, time, prior learning. | <b>2 TASK</b><br>Exactly what the AI should produce. | <b>3 CONSTRAINTS</b><br>British English, level, length, task types, what to avoid. | <b>4 CHECK</b><br>Verify answers, flag uncertainty and revise against criteria. |
|---------------------------------------------------------------------------|------------------------------------------------------|------------------------------------------------------------------------------------|---------------------------------------------------------------------------------|

  

|                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>REUSABLE TEACHER BRIEF</b> | <p>I teach [grade / approximate language level]. We are working on [topic or skill].</p> <p>Create [specific resource] for a [duration] activity. Use British English and approximately [CEFR / difficulty]. Include [required features] and avoid [unwanted features].</p> <p>Before presenting the final version, check that: (1) instructions are unambiguous; (2) every answer in the key is supported; (3) difficulty matches the level; and (4) uncertain factual claims are flagged. Then give me the classroom-ready version only.</p> |
|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## 3. Review before students see it

|                                                                                                                 |                                                                                                                         |
|-----------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------|
| <input type="checkbox"/> <b>Accuracy</b><br>Facts, grammar, calculations, names and references are correct.     | <input type="checkbox"/> <b>Fit</b><br>Objective, age, language level, lesson time and context match.                   |
| <input type="checkbox"/> <b>Answers</b><br>You tested the answer key and distractors rather than trusting them. | <input type="checkbox"/> <b>Clarity</b><br>Students can follow the instructions without seeing the AI conversation.     |
| <input type="checkbox"/> <b>Access</b><br>Language, layout and task load are usable for the intended group.     | <input type="checkbox"/> <b>Rights</b><br>Unnecessary copyrighted passages/images and unattributed material are absent. |
| <input type="checkbox"/> <b>Privacy</b><br>No data crossed a boundary it should not cross.                      |                                                                                                                         |

## 4. Classroom workflows that benefit from iteration

|                                                                                                                                             |                                                                                                                                       |
|---------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|
| <b>Differentiation</b><br>Create the same core task at two language-support levels, then check that the learning objective stayed the same. | <b>Retrieval practice</b><br>Generate a short mixed review from teacher-supplied concepts, remove ambiguity and rebalance difficulty. |
| <b>Examples &amp; non-examples</b><br>Ask for contrasting examples that help students discriminate a form, feature or concept.              | <b>Model improvement</b><br>Create a deliberately imperfect fictional response for annotation, correction or peer discussion.         |
| <b>Question variants</b><br>Draft several versions of one question type and choose the clearest rather than accepting the first.            | <b>Planning alternatives</b><br>Compare two or three lesson sequences under the same constraints before selecting one.                |

## 5. Assessment: useful assistance vs. human control

| USEFUL ASSISTANCE                                                                                                                                                                                                                                                                                             | KEEP HUMAN CONTROL                                                                                                                                                                                                                                                                                                   |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"> <li>• Draft question variants from teacher-approved content</li> <li>• Suggest distractors, then test why each is wrong</li> <li>• Turn a teacher rubric into student-friendly checklist language</li> <li>• Create fictional practice responses for moderation</li> </ul> | <ul style="list-style-type: none"> <li>• Check every answer key</li> <li>• Do not expose identifiable student work to an unapproved service</li> <li>• Do not delegate final high-stakes grades or disciplinary decisions</li> <li>• Use established procedures for safeguarding and confidential matters</li> </ul> |

## 6. Choose the environment to match the task

|                                                                                                                                        |                                                                                                                                                                       |                                                                                                                                                                |
|----------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>PUBLIC AI</b><br><b>General, non-sensitive drafting</b><br>Use only within school rules and without data the service does not need. | <b>SCHOOL-MANAGED AI</b><br><b>Controlled access and shared workflows</b><br>Use when the school has approved the service and its handling of the relevant task/data. | <b>LOCAL AI</b><br><b>More infrastructure control</b><br>Useful for future protected workflows, but still requires authentication, permissions and governance. |
|----------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|

## 7. One-workflow action plan

|                                                |       |
|------------------------------------------------|-------|
| Recurring task I will test:                    | _____ |
| AI will help with:                             | _____ |
| Data I will not provide:                       | _____ |
| I will check:                                  | _____ |
| After one classroom cycle, I will keep/change: | _____ |

**Core principle:** AI output is a draft until a responsible person checks it. Keep the workflow only if it genuinely improves the work.
